

The next generation in drill technology

Straumann® Twist Drill PRO Ø 4.2 mm

Careful surgical site preparation is very important for obtaining high implant primary stability. For optimal implant bed preparation, drills with wide diameters require particularly precise handling.

We developed the Twist Drill PRO Ø 4.2 mm to prevent over-preparation of the osteotomy site. The rounded flat-end tip facilitates safe drill positioning and ensures secure drill centering in the implant bed. The defined direction is maintained throughout the entire drilling process. The Twist Drill PRO Ø 4.2 mm is available in a short and a long version.
